JOB NUMBER

N1-058-09-

Background:

The Correspondence Imaging System (CIS) was developed in response to a need for a more efficient approach to processing and handling paper taxpayer correspondence received in the Wage & Investment (W&I) Customer Account Services (CAS) Accounts Management (AM). The CIS system is currently in production in the following W&I CAS AM sites: Andover, Atlanta, Austin, Brookhaven, Cincinnati, Fresno, Kansas City, Memphis, Ogden, and Philadelphia. This system was developed for operation within IRS's standard corporate computing infrastructure, which includes workstations, Windows 2000 Servers Tier III environment using Content Manager, and DB2 database management software (DB2). The imaging application utilizes Web Sphere, Oracle Form and Reports, Documentum, IBM NQ, and Business Objects for Reporting software on high volume and mid-range scanners. Note. DB2 Database was replaced with Oracle 10g Database in 2009, and DB2 no longer supports the CIS effort.

The Customer Applications Development Division (CADD)/Audit Programs & Support Services Branch (APSS)/Information Management Applications Section (IMAS) partnered with contractors and developed the project with Commercial-off-the-Shelf (COTS) software products, supplemented by custom programming for business logic and web interfaces. CIS supports the imaging sub-system and is deployed on the scanner hosts. This software is used to initialize the scanner and is the mechanism by which paper is converted to images. The Content Manager (CM) manages images and monitors the flow of the digital documents, respectively. Customer Service Representatives access their cases (images) via Internet Explorer and Java applets. A key capability of the CIS Content Manager software is the scalable and distributed architecture that provides an enterprise-wide catalog. The enterprise catalog provides a centralized repository to manage documents across multiple systems and sites. CIS also provides a distributed architecture, allowing for the deployment of scanning, indexing, and quality assurance tasks across multiple workstations per site.

Correspondence Imaging System (CIS)

Description:

The Correspondence Imaging System (CIS) captures images of correspondence from taxpayers intended for Accounts Management (AM) employees. Correspondence includes TaxPayer letters, returned notices (CP responses) and standard forms (i.e., SF 1040X, 1120X, 941C) which are scanned and electronically routed to AM employees. After work is completed on a case, including any quality review processes, the images are stored following retention guidelines, and are accessible by other employees with CIS access should the need arise.

~~CIS interfaces with the systems via the Integrated Data Retrieval System (IDRS). IDRS communicates via a set of IDRS command codes that are executed as server side calls, as well as, through the IDRS terminal emulation session. These commands gather information from TIF, Master File and CFOL Databases. CIS also interfaces with the SACS system to authenticate users and to leverage their security model. Additionally, CIS images IRS internally generated transcripts and notices that ultimately become case work for Adjustments CSRs.~~

GRS 20

Disposition TEMPORARY Delete/destroy when no longer needed for operational purposes

**Note – CIS outputs are retained in the recipient systems as the official records.*

D. System Documentation

System Documentation for the Correspondence Imaging System (CIS) consists of codebooks, records layout, User Guide, and other related materials.

Disposition TEMPORARY Delete/destroy when superseded or 5 years after the system is terminated, whichever is sooner.
