1.	<p>Cardiac Catheterization Films (motion picture) are produced to record blood flow and the anatomy of a patient's heart for future analysis and evaluation. The film represents the original copy of the images of the heart and provides a visual record of the insertion and passage of a catheter (thin flexible tube) through an artery into the heart.</p> <p>The 35mm films are stored in metal canisters and placed on film racks in chronological order of the test with cross reference to patients' names and Social Security Numbers.</p> <p>Disposition: Destroy 20 years after the last episode of patient care. Note: Films required for research, legal, and clinical purposes may be retained for a longer period of time.</p>
