I.42 WELD X-RAY FILM

These records are used during forced and annual outages. The origin of the weld x-ray records occur when boiler tube x-rays are taken during an outage. Each time a new section of boiler tube is welded in, two x-rays are created - one on each weld end. While x-rays are being made, a unit of the plant is usually shutdown for a two month period. The x-rays may be reviewed several times during this period, but when the outage is over and the unit is brought back up, they are no longer used. The records verify that an activity was performed in accordance with the applicable requirement, but need not be retained for the life of the plant or item.

These records are used as a weld certification and a welder's certification of no leak path. Boiler tube x-rays decrease the risk of returning a unit to service with a boiler tube leak.

DISPOSITION

- A. Original x-ray film - maintain in compliance with regulatory requirements.

Retain for 6 years after plant or item is put into operation.

- B. Electronic Mail and Word Processing System Copies *GRS 20, items 13-14*
