Hydrographs of the Daily Flow and Elevations of Water in the TVA Reservoir System (see attached description).

*Copies sent to Agency, NNA, ANN 6/4/92*

1. HYDROGRAPHS OF THE DAILY FLOW AND ELEVATIONS OF WATER IN THE TVA RESERVOIR SYSTEM

Reservoir Operations generates hand-plotted hydrographs which measure the daily flow and elevations of water in the TVA reservoir system. Multiple graphs are normally on a single 11-inch by 14-inch sheet, and the different graphs are color coded. After the hydrographs have been used in reservoir operations planning, they are kept and used for engineering studies, statistics, and quick reference to help manage the reservoir system during extreme flow conditions such as droughts or floods. The original paper hydrographs are maintained because microfilm will not accommodate the color coding.

The hydrographs date from 1933 and continue. The total volume in 1990 is approximately 45 cubic feet. The approximate annual accumulation is 1 cubic foot.

DISPOSITION

Destroy in agency when no longer needed for reference, not to exceed 5 years after TVA no longer operates the reservoir system. Transfer to the TVA Knoxville Records Center when reference activity declines.
