1. GEOLOGICAL DATA

Engineering data obtained from borings, field exploration, and laboratory testing programs, include evaluations, studies, analyses, photographs and reports developed from these programs.

The records created from site explorations include planning and site evaluations. The evaluations state the advantages and disadvantages of each site under consideration for future sites; general information on future sites; site investigations of soils and foundation rocks; core drill holes, data and logs; geologic logs; preliminary plans for design, construction, and cost comparisons between alternative generating plant sites.

When Geology and Geotechnical Engineering was dissolved October 1, 1990, part of the records were transferred to Power Engineering and Construction. The remainder became the property of Corporate Records Management since no organization took responsibility for them. The records should be maintained until the plant, dam, or facility no longer exists. The records are critical to future design and for assistance in mitigation of problems. The records are valuable to TVA for future reference and to prevent the need for future surveys of the same sites.

There are 81 cu. ft. stored in the Knoxville Records Center dating from 1935 to 1988. The 81 cu. ft. consist of 49 cu. ft. of records for deferred nuclear plants, 27 cu. ft. for Fossil and Hydro; 3 cu. ft. for the Clinch River Breeder Reactor Project, and 2 cu. ft. for the Chattanooga Office Complex.

PE&C transferred to the Chattanooga Records Center 40 cu. ft. of these records for storage with additional records to be transferred as they are inventoried and boxed.

DISPOSITION

A. RECORDS FOR DEFERRED NUCLEAR PLANTS

Transfer to the Federal Records Center upon approval of this schedule. Destroy when newest record is 25 years old.

B. ALL OTHER RECORDS

Maintain in TVA Records Center. Transfer to Federal Records Center when newest record is 15 years old. Destroy when facility no longer exists.
