Quality Records for the Clinch River Breeder Reactor Plant (CRBRP) Project: Request for Authority to Preserve Records on Microfilm and Dispose of Original Records

The Clinch River Breeder Reactor Plant (CRBRP) Project is a joint undertaking of the United States Government and the nuclear industry of the United States to design, construct, and operate a Liquid Metal Fast Breeder Reactor (LMFBR) power plant on the Tennessee Valley Authority (TVA) system in Oak Ridge, Tennessee. Plant will be licensed by the Nuclear Regulatory Commission under the provisions of the Energy Reorganization Act of 1974. Execution of the Project will result in may documents being prepared to assist in Project management and to record Project accomplishment. Some of these documents will relate to the quality of the Plant, its configuration and to activities affecting quality. These documents will be collected and maintained as quality records. accomplish this collection and maintenance task, the Project has established and is implementing a Projectwide quality records management system. It is in this quality records system that all records pertaining to Plant quality will be microfilmed and indexed with the

	exception of selected instances when legibility or expected use does not justify microfilming. At the present time, 9 cubic feet of series 1.0. Design Qua Records, are on hand which the Project elects to ret as paper copies rather than microfilm. It is estimated that only 20 cubic feet per year will be required for quality record paper storage at the present rate of accumulation; but that additional space will be required in the future. The Project requires life-of-plant security storage for these paper records, in accorda with the nuclear storage requirements of ANSI N45.2.	ain ited or iired		·
	Certification: In accordance with the records disposition requirements of Federal Property Managem Regulations (FPMR), Section 101-11.506, this document certifies that the records described on this form she microfilmed in accordance with the standards set forth in 41 C.F.R. 101-11.506-3.	ıt	,	
	A complete working file of silver and/or diazo micro copies of all quality records is maintained at the CRBRP Project Records Center, Oak Ridge, Tennessee. routine requests for record copies are to be referred to this Center in order that the retrieval load will not be placed on the NARS East Point facility.	A11 ed		
	The following paragraphs explain further the circumstances of this request and describe extensively the records to be dispositioned.			
	This disposition request includes only quality records, that is records pertaining to the technical quality of the CRBR Plant and to activate affecting quality. These are documents which a not covered by the feet Records Schedules. documents are created by design engineers and cognizant technical professionals who create the documents to describe configuration of the Plant to describe items that are manufactured for the Plant, and to describe other quality related procedures and practices. An estimated 40 mill pages of this documentation will be created dur the design, procurement, manufacturing, installation-construction, and preoperational and staup phases of the CRBRP Project. All of this documentation is available to the U.S. Nuclear Regulatory Commission upon their request. Howe only the Safety Analysis Report and Quality	vities The The other ion ion ing
