EXPLANATORY NOTES

FUNCTIONAL STATEMENT

The Bureau of the Actuary is responsible for the preparation of estimates of the liabilities created by the 1974 Railroad Retirement Act (RRA). The bureau also prepares a five-year projection of anticipated revenues to and payments from the Railroad Retirement Account and a report of the actuarial status of the railroad retirement system under various economic and employment assumptions. In connection with these actuarial valuations, the bureau conducts studies of rates of mortality, disability, retirement, withdrawal, family composition and other factors. The bureau prepares long-range projections of the financial effects of proposed amendments to the RRA and Railroad Retirement Tax Act. The bureau recommends to the Board Members the rate of tax necessary to finance the supplemental annuity program.

Item 2-2

Actuarial Valuation Data Summaries

Current disposition: Destroy after completion of 4th subsequent valuation.

Proposed disposition: <u>Destroy when no longer needed for administrative use</u>.

Summaries consist of computer generated data used in triennial actuarial valuations. Includes data on mortality rates, retirement rates, service patterns, salaries, and related papers. It has been the experience of bureau personnel that much of the material has long-term reference value. Thus, a change from current retention of "destroy after completion of 4th subsequent valuation" to "destroy when no longer needed for administrative use" has been requested. The proposed retention better satisfies the administrative and reference needs of the bureau.
